Gary - can you do some research in prep for tomorrow's briefing about how the recent landfill construction activities affect Bridgeton and NSPS? For example, would it constitute a "reconstruction" under NSPS triggering additional requirements, such as seeking "re-approval" of their landfill design?

Or, how does the construction of additional wells and such affect compliance with gas collection and methane levels...is it considered an SSM if they have gas emission spikes during this construction period?

Thanks!

Mark A. Smith
